

Ball Corporation is committed to environmental protection and reducing our environmental footprint, including our impacts to air, land, water and energy consumption. Ball Corporation and our employees will strive to conduct all business activities and operations in a manner that minimizes impacts to the environment. Protecting our global environment is vital to our business and to the communities where we operate.

We will continuously strive to improve our environmental performance through our sustainability goals and environmental management systems and comply with all applicable regulations in the countries we operate. Our efforts, however, extend beyond compliance.

Continuous improvement in environmental performance will be implemented, documented, maintained and reported.

Adherence to this policy is the shared responsibility of all of our employees with each plant and/or facility manager having overall responsibility for compliance.

Lisa A. Pauley
Vice President, Administration and Compliance
