

METAL ENDS

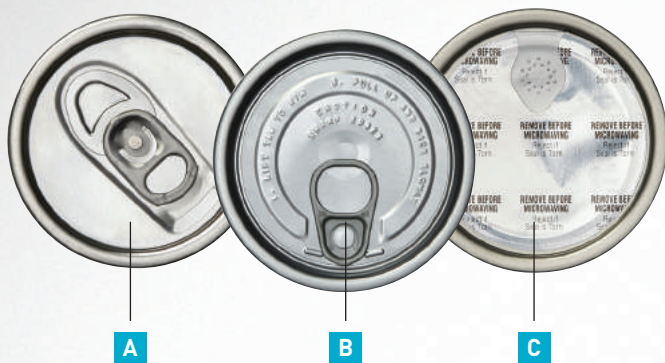

Your can end is all that stands between the consumer and your product. Ball Corporation is one of the largest food can and end manufacturers in North America. We offer a variety of metal end solutions, as well as innovative features that help differentiate at retail. As with all our can services, our metal ends and closures are accompanied by technical support from our highly-regarded seamer service team.

Highlights

- A complete range of sanitary and convenience closure options
- Robust coating systems compatible with a wide range of products
- Lithography, colored tabs, embossing, and incising available
- Non-epoxy coating options by request

» Range: 211-401

C Membrane (Ultrapeel Retortable)

» Range: 211 and 307

Sanitary End Sizes

Ball makes a range of sanitary ends, from 202-603. Embossing, incising and lithography available.

Features Available

• Lithography

Ball's advanced printing capabilities offer premiumization and differentiation in the competitive retail environment. Lithography is also available on the underside of the end and is a great tool to engage consumers in a promotion or brand messaging.

• Embossing

Embossing, or raised profile, creates a tactile experience for the consumer to communicate branding or usage instructions through illustration or messaging.

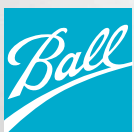

• Incising

(Aluminum ends only) Incising, or engraving, offers an opportunity to communicate with your consumer with logos, designs or messaging.

• Colored Tab

With nearly infinite colors available, colored tabs add a pop of color to grab the consumer's attention.
